

ABSTRACT

The project is aimed at developing an online ticket reservation system for a Cinema Hall. The Ticket Reservation System is server side based application that can be accessed by the staff of the cinema halls. The application will automate the reservation of tickets. The proposed system is a web based application where one can buy tickets with just one click. The system provides the customer, to book tickets at any time of the day. Provides all the necessary information about the booked tickets, vacant seats and their availability.

The proposed system provides the enhancement in the existing system of online ticket reservation of the cinema halls.
